

Ajay Tiwari

Data Analyst

tiwariajay110125@gmail.com | +91 8191941680 | Noida, India | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Data analyst who has cleaned, modeled, and visualized **6.3M+ records** across banking fraud, customer churn, and workforce datasets, uncovering an **0.18% fraud rate** across **\$8.97bn+** in transactions and a **25.89% churn rate** across **8,000 users**. Skilled in SQL, Python, and Power BI, with internship experience evaluating **300+ LLM outputs**, ramping from 20-25 to 50 tasks/day within a team of 50.

TECHNICAL SKILLS

Data Processing & Analysis: Exploratory Data Analysis (EDA), Statistical Analysis, Data Cleaning, Data Validation

Programming & Querying: Python (Pandas, NumPy), SQL (MySQL, PostgreSQL)

Data Visualization: Power BI, Tableau, Matplotlib, Seaborn

Tools & Platforms: MS Excel (Advanced), Jupyter Notebook, Google Colab, GitHub, Git

EXPERIENCE

LLM Post-Training Intern (Data Analysis & Model Evaluation)

02/2026 – 04/2026 | Gurugram, India

Ethara AI

- Performed output quality validation across **300+ LLM responses** using structured rubrics to identify failure points and inconsistencies, applying the same logic as data quality assurance workflows.
- Conducted **multi-model comparative analysis** benchmarking outputs across Gemini, GPT, Claude, Kimi, and GLM; identified performance gaps and iteratively upgraded evaluation rubrics to improve model output quality across STEM, text, and image tasks.
- Contributed within a **cross-functional team of 15 to 50 members**, working on 7-step progressive prompting pipelines that mirror iterative data validation cycles - evaluate, identify failure points, refine, repeat.

PROJECTS

Banking Transaction & Customer Risk Analysis

03/2026

MySQL, Python (Pandas), Power BI, Excel

- Collected, prepared, and validated **55,554 transactions (11 variables)** from a 6.3M-record PaySim dataset using SQL, Python, and Excel; confirmed zero nulls and zero duplicates.
- Uncovered that **18% of customers drove 62% of total transaction value**, enabling prioritization of high-concentration customer segments for risk and business decisions.
- Engineered **value_category** feature in Python revealing **18% greater fraud probability** in high-value transactions (0.20% vs 0.17%); fraud concentrated exclusively in TRANSFER (0.94%) and CASH_OUT (0.33%).
- Assembled an interactive **Power BI dashboard** with 4 KPIs and transaction-type drill-down, visualizing **\$8.97bn+** in total transaction value for non-technical stakeholders.

Spotify Customer Churn & Behavior Analysis

04/2026

MySQL, Excel

- Analyzed **8,000 user records across 8 countries** covering behavioral signals including listening time, skip rate, songs played, and ad exposure, uncovering a **25.89% churn rate** (2,071 users) from 12 variables.
- Individually tested **6 behavioral and demographic features** for churn correlation; skip rate showed the largest variance between churned and active users (**0.305 vs 0.298**) but near-identical averages across all features led to independently reframing the problem around a **combined multi-signal segmentation approach**.
- Built and refined a **rule-based churn risk model** across 4 versions: 492 high-risk (28.46%), 2,106 medium-risk (26.54%), 5,402 low-risk (25.40%), each mapped to a targeted retention strategy for stakeholders.

Layoff Trends & Workforce Analysis

11/2025

MySQL, Python (Pandas), Excel

- Cleaned and standardized a **3,642-row raw dataset (12 variables)** to 1,995 validated records, resolving 1,300+ null percentage fields and 1,253+ null layoff counts using SQL staging tables and ROW_NUMBER().
- Identified **US as the most impacted country (256,559 layoffs)** and **Post-IPO as the highest-risk stage (204,132 layoffs)** via rolling monthly totals and DENSE_RANK().
- Validated data integrity in **Python (Pandas)**, confirming zero duplicates and documenting null distribution across 3 key columns: Laid-Off Count (1,253), Percentage (1,300), Funds Raised (390).

EDUCATION

B. Tech: Computer Science and Engineering (Artificial Intelligence)

10/2022 – 06/2026 (Expected) | Greater Noida

Noida Institute of Engineering and Technology

CGPA: 8.63

CERTIFICATIONS

[IBM: Python for Data Science \(2023\)](#) | [IBM: Data Visualization \(2024\)](#) | [Infosys: Tableau \(2024\)](#) | [MyAnatomy: Data Science \(2025\)](#)

ACHIEVEMENTS

Finalist - Start Up Arena

02/2026

NIT Trichy

Ranked 1st among 80-100 teams (300+ participants), qualified for national finale.

Inspire Scholarship Award 2021

05/2021

Government of India

Awarded to top 1% in Class 12 board exams nationwide.
